

Goodloading offer for furniture manufacturing companies

Goodloading is an **application for load planning in the cargo space**. The algorithm places loads in the semi-trailer so that they use its space to its fullest capacity. Goodloading can be used not only in road transport or for containers.

WHY IS IT WORTH IT?

Planning the load for standard cargo usually does not require the use of additional tools by the planner. A large number of loads stacked in a proper order may be a challenge, however. **That is why so many furniture manufacturers are interested in the application.**

The 3D visualisation of the load and the ability to work with own load and vehicle dimensions allow for saving time required for the calculations. Sending a completed project to another person accelerates the loading process and minimises the risk that something will not fit in. If the entire space is not loaded, **Goodloading will suggest other spaces (trucks or containers) that will be suitable for the loads. Choosing a smaller vehicle usually generates lower costs.**

Goodloading is becoming more and more popular among furniture manufacturers due to its ability to quickly calculate the space for loads of various sizes and weights.

KEY FUNCTIONS

We asked the persons that plan the furniture arrangement at Goodloading to list the most important features. They listed:

the ability to load irregular cargo

transport optimisation: fitting all the goods in the space on the route to the customer or a warehouse

indicating the recommended cargo space by the program, particularly for manufacturers that do not have their own fleet

the ability to upload a CSV file with a load list

loading draft in the form of a link or a PDF file

Goodloading is constantly updated—practically every month, we implement further features that our users request. **If you have any suggestions or questions regarding the application, please contact us.**

PRICE

Goodloading is available in free and PRO version. In the free version, the user is not able to add his own dimensions of vehicles and loads to the application. However, we encourage you to test it to decide whether the functions provided meet your needs.

Test to check if it's worth buying	Subscription 12 months	Subscription 3 months	Subscription 1 months
